

Web API: Get license details by ID

The 'Get License Details by ID' API enables developers to query and retrieve occupational license details based on a license ID. It works in conjunction with a complementary service which provides a list of Licenses and IDs.

About this data

License information is collected from each state by the [Analyst Resource Center](#) (ARC). States are expected to submit revisions every two years, and new information is updated on CareerOneStop every 4-6 months as new information is received. Information includes license titles, authorizing organizations, descriptions of licenses, and O*NET codes. Please note that not all states submit license information and there is no way to guarantee that each state collects all of the license information for their state. You can see License data on the CareerOneStop [License Finder](#). For more information, visit [License Finder Help](#).

Try this Web API

Example Code

C#

Java

```
using System;

using System.Net.Http;

using System.Net.Http.Headers;

using System.Threading.Tasks;

namespace CareerOneStopAPISample
{
    class Program
    {
```

Request Parameters

Refer to the following table for a list of the required and optional request parameters. All parameter names and values are case sensitive. Important: You must provide all required parameters. Submitting an empty request does not return all possible results, an empty request returns an error.

Parameter Name	Value	Required?	Description
API Token	String	Yes	This value is the unique API Token provided during the CareerOneStop Web API registration process
userId	String	Yes	This value is the unique UserID provided during the CareerOneStop Web API registration process
licenseId	String	Yes	This value is the unique ID for the license. It can be obtained from the licenses search API (List Licenses).

Response Structure

Errors

Error/Status Code	Description
200	OK / Success. The request went through successfully and there is a response body.

Error/Status Code	Description
400	Bad Request (Request was invalid or missing parameters)
401	Unauthorized. This error occurs specifically when authentication is required and has failed or has not yet been provided correctly. (ex: Invalid API Token)
404	This error will be shown in two scenarios 1) Not found - (An error occurred) and 2) Not found - (No data available)
500	Internal Server Error. This error will occur when there is something critically wrong in the API call.
